PROFESSIONAL SUMMARY

Data-driven engineering student with strong academic performance (CGPA 8.97) with expertise in Python-based data analysis, machine learning, and predictive modeling across 3 industry internships. Proficient in building end-to-end analytical solutions. Demonstrated problem-solving ability through national-level hackathon wins and Oracle-certified expertise in AI and Data Science.

TECHNICAL SKILLS

Languages and Programming: Python, SQL (MySQL), Bash

Libraries and Frameworks: : Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Data and Analytics: Data Structures and Algorithms, Exploratory Data Analysis, Predictive Modeling, Feature Engineering, Risk Analysis, Model Evaluation, KPI Analysis

Tools and Platforms: Git, GitHub, Jupyter Notebook, Power BI, Microsoft Excel, Google Colab

Core Concepts: Artificial Intelligence, Machine Learning, SDLC, Anomaly Detection, Statistical Analysis

EDUCATION

D.Y.Patil College Of Engineering, Akurdi, Pune

Bachelor of Engineering in Robotics and Automation (CGPA: 8.97)

2022 – 2026

Pune, Maharashtra

Maharashtra State Board of Secondary and Higher Secondary Education

Higher Secondary Education (Percentage: 94.67%)

2019 – 2021

Central Board Of Secondary Education

Secondary Education (Percentage: 95.00%)

2019

EXPERIENCE

Soft Nexis Technology | Data Science Intern

Oct 2025 – Dec 2025

- Engineered a Python-based authentication log analysis pipeline to detect abnormal login patterns across 5,000+ log entries, directly supporting the security risk detection workflow.

NoviTech Research and Development Pvt. Ltd. | Data Analyst Intern

Jul 2025 – Aug 2025

- Collected, cleaned and processed structured and unstructured datasets using Python and Pandas. Conducted EDA to surface key business trends and patterns, delivering documented insights that informed business decisions.

Smart Bridge Educational Services Pvt. Ltd. | Experiential Training

Jun 2025 – Aug 2025

- Applied supervised ML techniques on real-world healthcare datasets to build predictive models for patient outcome analysis, achieving actionable insights with structured EDA.

PROJECTS

Customer Churn Prediction and Retention Strategy Engine | *Python, Scikit-learn, MySQL*

- Developed a classification model to predict customer churn on a dataset of 3,000+ records, performing EDA and feature engineering to identify key behavioral drivers.
- Achieved model accuracy after hyperparameter tuning and evaluated performance using precision, recall, and confusion matrix visualizations.

Authentication Log Analysis and Security Risk Intelligence | *Python, Pandas, MySQL*

- Analyzed 5,000+ authentication log records to detect abnormal login patterns by computing user-level and IP-level metrics such as login failure rates and access frequency using Python and SQL.
- Built a rule-based risk scoring system to flag suspicious behavior, successfully identifying and categorizing 3 risk levels across the dataset with structured output reports.

Real-Time Product Analytics Dashboard | *Python, Streamlit, MySQL, Pandas, Matplotlib*

- Built an interactive Streamlit dashboard connected to MySQL to track KPIs across 5,000+ user records, visualizing retention, session trends, and daily engagement through dynamic charts.
- Developed a Pandas-based data pipeline for cleaning and transforming raw activity logs, with segment-level filters reducing manual analysis time significantly.

CERTIFICATIONS

Oracle OCI Data Science Professional : (Oracle)

Oracle OCI AI Foundations Associate : (Oracle)
